EDUCATION

California Polytechnic State University San Luis Obispo

B.S. in Computer Science

GPA: 3.5/4.0

Expected May 2027

San Luis Obispo, California

Relevant Coursework: Data Structures & Algorithms, Systems Programming, Computer Security, Programming Languages

EXPERIENCE

Software Engineering Intern

Jan 2026 – Present

Cal Poly Bailey College of Science and Mathematics

San Luis Obispo, California

- Built an internal media management system with Microsoft Power Automate and metadata so staff can organize, review, and recover university media without managing every file by hand.
- Built a reliable automation workflow with duplicate checks, automatic retries, and safe file handling so large media transfers can recover from errors instead of starting over.
- Worked from staff review and organization needs to create searchable workflows that help people find and approve media while keeping university files organized and secure.

Undergraduate Researcher

Aug 2026 – Present

Cal Poly Department of Computer Science and Software Engineering

San Luis Obispo, California

- Built a Python backend evaluation tool for Overcooked-AI so researchers can repeat AI experiments and compare results fairly.
- Used Python, command-line tools, CSV data, and automated testing to understand how AI teammates move, wait, block each other, and work together.
- Added automated tests and repeatable experiment checks so researchers can catch mistakes and trust the results before using them in their work.

Technology Solutions Research Intern

Jul 2025 – Mar 2026

Foundation for California Community Colleges

Los Angeles, California

- Analyzed financial aid and student data to help explain why some community college students have trouble completing the FAFSA process.

AI Document Insights Extern

Feb 2025 – Apr 2025

Extern

Los Angeles, California

- Built a Python backend AI application using LlamaIndex, Gemini API, Ollama, embeddings, and RAG so users could ask questions about mortgage documents and receive answers based on the documents.
- Tested different AI models, retrieval methods, and prompts, then presented the finished system and findings to Outamation stakeholders so they could understand what worked and why.

PROJECTS

Guppty Programming Language | Project Site

Rust

- Built a programming language in Rust with a compiler and interpreter, then used Git, GitHub Actions CI/CD, and automated testing to make sure programs continue working correctly when the code changes.

Gitex | Live App

TypeScript, React, JavaScript

- Built a full-stack TypeScript and React application using Gemini AI, APIs, Convex vector search, GitHub Actions CI/CD, and Sentry monitoring so users can ask questions about code while developers can catch problems before and after release; used GitHub, Claude Code, Cursor, Codex, and GitHub Copilot during development.

SKILLS

Languages: Python, TypeScript, JavaScript, Rust, Java, C, C++, SQL, HTML/CSS

Frameworks & Libraries: React, Next.js, Node.js, FastAPI, Tailwind CSS, Vite

Databases & Infrastructure: PostgreSQL, Redis, Convex, Docker, Celery, Prometheus, Grafana

Developer Tools: Git, GitHub Actions, GitHub Copilot, Claude Code, Codex, Cursor, Unix/Linux, Microsoft Power Automate

AI & Retrieval: LlamaIndex, Gemini API, Ollama, RAG, Embeddings, Vector Search
